

## Christie's Auction House – New York

**Architect:** M Moser Associates

**Client:** Christie's

**Completion:** 2014

Christie's is renovating their 5<sup>th</sup> and 6<sup>th</sup> floor spaces at 10 Rockefeller Center, which includes private and open office areas as well as videoconference rooms.

Working closely with the design team, we are providing guidelines for the office front and interior door system details to achieve the office privacy goals that were established after discussing options with Christies. We specified finish material and design recommendations to optimize open office plan acoustics and also to comply with strict acoustical criteria by the videoconferencing equipment in the dedicated videoconferencing rooms. Additionally, we provided acoustical design recommendations to mitigate background noise levels from HVAC equipment and control of equipment vibration.

We are working closely with the architects and designers to achieve quiet spaces to be used and enjoyed by the fine art auction house's employees and guests.
