

## **Crunch – New York and New Jersey**

**Architect:** OGP Architects

**Client:** Crunch

**Completion:** Ongoing

We are on-call to provide acoustical consulting services for Crunch fitness clubs, with the range of services including recommendations for lease negotiations, verifying location suitability, completing onsite testing, peer review of input from other consultants, answering technical questions, and additional services, as needed.

Each individual Crunch location possesses different acoustical needs depending on its location within a building, base building construction, space plans, and program requirements. After identifying Crunch's intentions for the space layout, we typically visit each site conduct onsite testing. During our testing, we determine the natural frequency of the base building structural slab, and determine what options for noise and vibration control are feasible within the constraints of the existing space. Our recommendations are then incorporated into the overall design of the Crunch fitness club.

Our extensive experience in solving existing or potential fitness club noise and vibration issues maximizes Crunch's fun and entertaining atmosphere while minimizing issues to neighbors.
